

## ***Lab Link social network development***

### **Basic Design of Lab Link social network system**

Construction of the network system that is based on the life law

#### **1. Basic design of the whole system**

- \* From lower part system supporting the whole system to the higher one, We design structure of nesting hierarchy.
- \* We built all system as follows. The top part system is self. The foundational system can be unified by love of life. The lowest system that is love of life means potential system.
- \* Lab Link defines autonomy as mechanism in order to control egocentric self-increase autonomously. Therefore autonomy mechanism can construct with interdependence.
- \*\* Generally speaking, the business and scientific system misunderstand love concerning religious cult in Japanese modern society. Therefore, We avoid direct expression for love of life. But Lab Link design all system in business policy including love of life as the lowest system. Because we hope that much people feel love of life in themselves and nature, society and community.  
We feel and recognize that love of life is included in all phenomenon. This is told bio ethics of Dr. Macer. (D.Macer,Bioethics is Love of Life,1998).  
For understanding meaning that all system include love of life in Japanese modern society, Lab Link needs advanced scientific knowledge. Therefore, Lab Link designs that the lowest system is free think tank by holistic approach in web site of virtual world. Lab Link suggests experience and health maintenance to feel life of ourselves in real world.

#### **2. Basic design of the autonomous self-organization**

- \* We made much of autonomy in each systems.
- \* We design circulation mechanism of unification and differentiation in whole and partial system.

#### **3. Basic design of the interdependence self-maintenance**

- \* We design feedback mechanism in each system inside.
- \* We design the interdependence among each system and in each system inside.

#### **4. Basic design of the holistic harmonized evolution**

- \* We design autonomic maintenance mechanism of circulation and process of evolution by spiral in the partial system.
- \* We design based mechanism as follows. All system become holistic harmony in the long term process .
